BioWizard Launches Version 2.0

***User-driven Online Portal Offers Life Scientists and Physicians
Powerful Research and Collaboration Tools***

Philadelphia, Pa., – February 28, 2007 – BioWizard, LLC (www.biowizard.com), an online information and communications portal specifically designed for the biomedical research community, today announced version 2.0 of its free, web-based community targeted to the life science marketplace. As a central resource for the dissemination of scientific information, BioWizard.com enables life scientists and physicians to expand their knowledge, collaborate with colleagues and keep pace with the latest trends in science.

“With biomedical information increasing at an exponential pace, the scientific community is finding it difficult to efficiently conduct their research, stay abreast of the rapidly growing landscape and communicate with their colleagues,” explained Jeff Boily, Chairman and CEO of BioWizard. “The new features offered in this version of our portal not only provide innovative tools for biomedical researchers to more easily search and share information but also to interact with other scientists around the globe by driving the content of our site.”

“BioWizard takes biomedical research to the next level,” noted Bobby Azamian, M.D., DPhil. “The site offers the valuable content of the National Institute of Health’s PubMed database, but by allowing users to post articles, vote on them and discuss key topics openly, they have created an environment that provides a one-stop shop for the biomedical research community, saving us time and keeping us at the cutting-edge of the market.”

BioWizard made a number of significant enhancements to both the layout and functionality of its research portal. In version 2.0, users are now able to find and discuss the most relevant scientific literature. Users can search over 16 million peer reviewed articles, submit relevant and timely research articles and post them to the BioWizard site. In turn the BioWizard user community can vote on and discuss the literature. The new and improved version also offers a listing of the top research papers by specific category as well as a comprehensive listing of the Table of Contents from the top scientific journals.

About BioWizard LLC

BioWizard is a free, web-based community for life scientists and physicians, aimed at making the world's biomedical research information universally accessible and useful. As the first online portal to focus on both the dissemination of information and collaboration within the scientific community, BioWizard's content is driven by its users helping them to streamline their research. The biomedical research portal offers a host of features including its PubMed Wizard search functionality, up-to-the-minute field-specific news, a comprehensive product directory and online forums that assist researchers in searching, sharing and discussing a myriad of scientific information. BioWizard was founded in 2005 and is headquartered in Philadelphia, Pa. For more information, please visit www.biowizard.com.
